

ASSIGNMENT SHEET

DESN 205 – Design for Electronic Media

DREAMWEAVER EXERCISE – PART 2

ASSIGNMENT:

Use the page setup in Part 1 as a template to create the four pages for the Yosemite website. Named anchors will be used on the pages to enhance navigation within the pages.

PROCESS:

1. Save your design.html page as a template. Name it “Yosemite Site Template”. Change the title of the template page to “Yosemite Visitor’s Buerau”.
2. Insert an editable region for the image div and name it “Page Image”. Insert an other editable region for the page-content div and name it “Page Content”. Be sure the editable region tags surround both the page-content div and the sidebar-nav div.
3. Create new pages for the four pages listed in the top-nav links based on the defined site template. Copy the content from the Word documents and past into the appropriate pages. Add tags to content for formatting. Place images from the Images folder in the site folder.
4. Create named anchors for the headings on the pages and link the sidebar navigation to them.
5. Test all links on the site.
6. Export the site and provide the site folder to the instructor.

IMAGE PLACEMENT

PAGE	FILE	ALT TEXT
Index	tufas.jpg	Tufas at Mono Lake
Things To Do	flowers.jpg	Wildflowers in Bloom
Things To See	lake.jpg	Lake overlook
Things To Know	trees.jpg	Sequia Grove

GRADING: 100 POINTS

Template file setup	20 points
Template applied to pages	20 points
Content on proper page	10 points
Images on correct page with alt tags	10 points
Content formatted correctly	10 points
Named anchors setup	10 points
Site Navigation works correctly	10 points
Files delivered correctly and on time	10 points
